

**The *MBGplus* 660l and 770l - Large Capacity,
Quality Approved Products.**

Technical Features.

Craemer supplies the Kliko MGBplus in a number of different versions, which can be used for residual waste disposal or the collection of recyclables. The 660 l and 770 l MGBplus containers are part of an ongoing development of the MGBplus family developed by Craemer with all the beneficial features of the MGBplus design.

Durability and Performance

Craemer's MGBplus containers are suitable for the collection of all waste streams and various adaptations are available. They comply and surpass all current European standards (EN 840). They are manufactured from HDPE (high density polyethylene), all 100% virgin material and are cadmium free.

Markings

The 660 l and 770 l MGBplus container lids and bodies can be suitably marked to meet individual customers requirements, embossing, hot stamping and screen printing.

Recycling

As with all Kliko plastic products the 660 l and 770 l MGBplus are suitable for recycling by a process of regranulation. The recovered material can be used for any other suitable process of manufacturing.

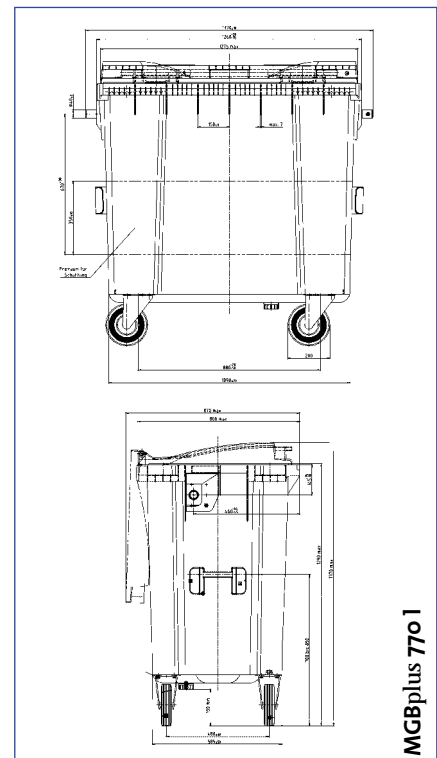

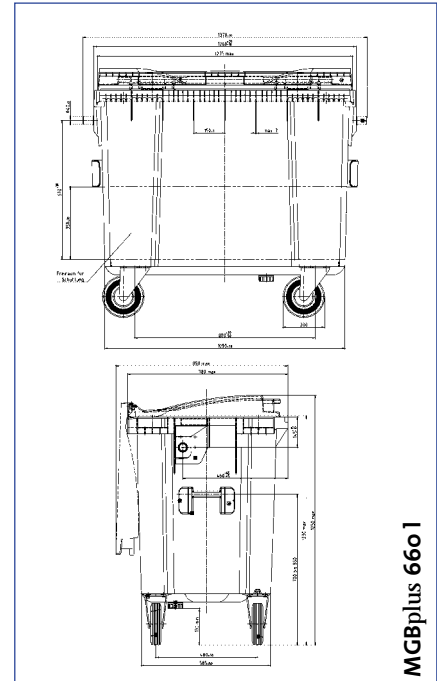

Technical Features

- Special front shaping unique to MGBplus range, giving greater strength and stability
- Volumes: 660 l and 770 l
- Manufactured in accordance with EN 840 and DIN
- Manufactured with 100% virgin material - cadmium free
- Quality assured to ISO 9001

Other Features

- Rubber tyred wheels for easier maneuverability
- 2 braked wheels
- Lid designed to accept various lid lock assemblies

We reserve the right to make any insignificant optical and technical changes or improvements.
